

The logo features a stylized white 'S' inside a circular swirl on a black background.

ScoringWorld

installer

The background is a close-up, warm-toned image of a historical manuscript. It shows a grid of lines with small circles and handwritten text in a historical script, possibly Italian or Spanish, with words like 'PIANO' and 'VIOLE' visible.

How to install your tool

How to install

Congratulations on acquiring one of the **ScoringWorld** Music Notation tools! Follow these easy steps to get your tool up and running.

The **ScoringWorld installer** works for all of our tools: Graphical MIDI Tools, Harp Tool, MIDI Transfer Tool, Walking bass, etc...

Before installing, please **ensure Sibelius is not running**.

1. Run the installer and activate

Run the **ScoringWorld Installer** application found in the downloaded .DMG (Mac) or .ZIP (PC) file.

- **On Mac:** double click on the **ScoringWorld Installer [...].pkg** to run the package installer.
- **On Windows/PC:** double click on **ScoringWorld Installer [...].exe** to run the setup wizard.

:

The ScoringWorld Installer package installer (Mac)

2. Activate (or *skip* for Free editions)

During the installation process, the activation window will appear, prompting you for your email and license key.

Enter your email and license key, or press Use Free/Lite Edition if you don't have one and want to try the Free/Lite Edition.

A single valid key installs all your products

If you own more than one product (like Graphical MIDI Tools and Harp Tool), any valid key you enter will install all the products you own, so there is no need to enter them separately.

The Product Activation Window

Once the email and key is validated you will see all your available products.

Verify your plugins

Open Sibelius and navigate to **Home Tab > Plugins**

You should see your plugins under the category Graphical MIDI Tools

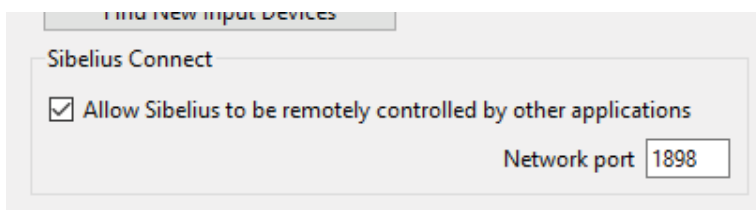

3. Enable Sibelius Connect

As of 2026, our tools require **Sibelius 2024.3 or higher**, as they use the **Sibelius Connect** feature to communicate with Sibelius.

To enable Sibelius Connect, go to **File > Preferences**.

- Select the Input Devices category
- Search for the Sibelius Connect section and tick “Allow Sibelius to be remotely controlled by other applications”
- Leave the Network port to its default value (1898)

Tip: Assign a keyboard shortcut for faster usage

With the Sibelius Connect feature enabled, your tool is ready to work.

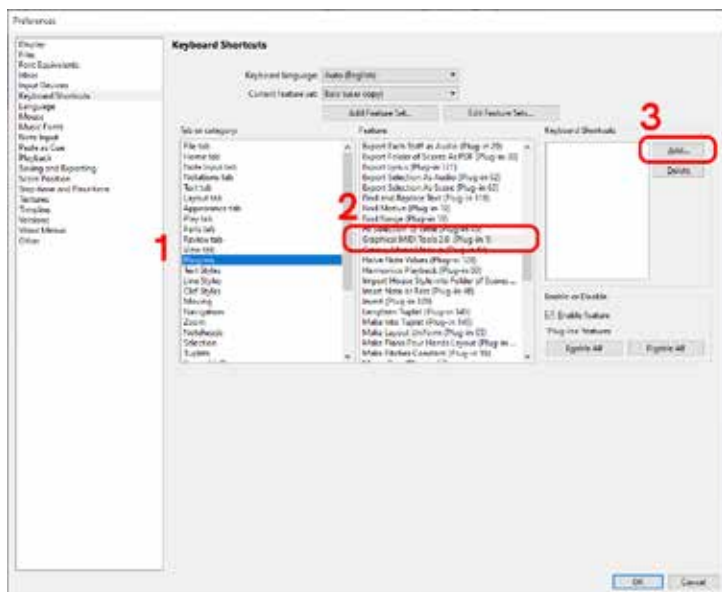

While you can run it from the menus, it may be useful to assign a **key-board shortcut** for a faster and smoother experience.

This is especially true in tools like **Graphical MIDI Tools**, which require a fast back and forth between its window and the score.

Follow the instructions in the next step to set up a shortcut.

Assign a keyboard shortcut (optional)

a. In Sibelius, go to **File > Preferences**. On the left column select “Keyboard Shortcuts”. You should see the following dialog:

(1) In “Tab or Category” choose “Plug-ins”.

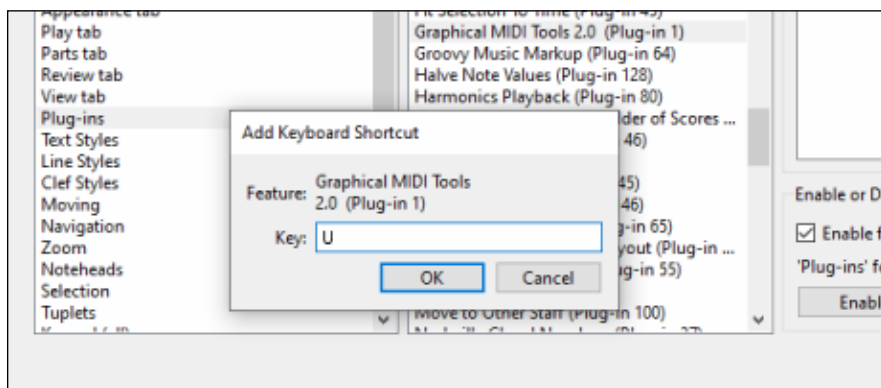

(2) In “Features” search for the option with your tool's name. E.g. “Graphical MIDI Tools [y.m.d]”.

(3) Click the “Add...” button.

Notice: If this is the first keyboard shortcut you add, Sibelius will ask you to create a new “shortcuts set”, since the “Standard” set cannot be overridden. Click “Yes” and indicate a name for the shortcut set (for example “My shortcuts”)

b. Choose a shortcut key.

In this example, we use the “U” key, which is unused in Sibelius, but you can choose the one that fits you best.

What's next?

Now you can start working with your tool. To get the latest news and documentation, we recommend you visit our official website:
